EDUCATION

Carnegie Mellon University

May 2028

Bachelor of Science in Computer Science | Dean's List with High Honors

Pittsburgh, PA

- **Relevant Coursework:** Data Structures and Algorithms in C, Computer Systems, Object-Oriented Programming, Functional Programming (Fall 2026 Teaching Assistant), Probability and Computing, Discrete Mathematics

TECHNICAL SKILLS

Languages: Python, Java, C, C++, TypeScript, JavaScript, SQL, Go, Shell

Tools & Infrastructure: AWS, Git, Docker, Jenkins, Linux/Unix, PostgreSQL, MySQL, Jira, MongoDB, Akamai, Nginx

Frameworks & Technologies: React, Node.js, FastAPI, Flask, Angular, Vue.js, Next.js, Vite, REST APIs

EXPERIENCE

Software Engineer Intern

Jun 2026 – Aug 2026

The Washington Post

Washington, DC

- Accelerated service issue resolution by 75% across a 2.5M+ subscriber base by developing a full-stack application with React, Node.js, and MySQL to centralize issue tracking and operator workflows.
- Engineered a large-scale production web service handling 15,000+ daily requests by configuring Akamai CDN, AWS Application Load Balancer, and Nginx to route traffic from users to the application.
- Automated CI/CD across 4 environments by provisioning AWS infrastructure as code with CDK in Java and building Jenkins pipelines to run unit tests and validate builds before deployment to S3.

Software Engineer Intern

Aug 2025 – May 2026

ScottyLabs

Pittsburgh, PA

- Streamlined meal planning for 10,000+ monthly active users across 30+ campus locations by developing a React, Vite, and TypeScript application that displays live dining availability and menus.
- Drove a 70% increase in daily active sessions by launching rating and distance-based search features with JavaScript and PostgreSQL, using GitHub Copilot to accelerate feature iteration and code review.
- Maintained 99.9% backend uptime by improving reliability with Node.js REST APIs and Docker containerization.

Software Engineer Intern

May 2024 – Sep 2024

Vytal.ai

McLean, VA

- Delivered brain health evaluations in under 30 seconds by building a gaze-tracking model that processes 8,000+ ocular data points in Python and serves results through Flask to an Angular frontend.
- Scaled cloud infrastructure for 300 beta users by managing MongoDB storage and deploying services on AWS EC2.
- Collaborated with a cross-functional team of 20+ engineers to ship features in biweekly Scrum sprints.

PROJECTS

Clarity | [GitHub](#) | [Demo](#) | Python, JavaScript, Go, MongoDB, Shell

Sep 2026 – Present

- Enable developers to visualize code in under 2 minutes by building a native macOS app that renders animated execution traces using Python, JavaScript, and Shell scripts.
- Coordinate 3 services through a Go backend that manages job execution and retrieves relevant Manim documentation from MongoDB Atlas to improve code generation accuracy.
- Create custom animations from screenshots by integrating the Gemini API for text extraction and the Anthropic API to produce executable Python code.

Sprynt | [GitHub](#) | [Demo](#) | Go, PostgreSQL, AWS S3, Next.js, React, FastAPI, Jira, GitHub

Mar 2026 – Aug 2026

- Achieved 95%+ accuracy in Jira ticket assignment and GitHub code fix recommendations for on-call engineers by building an end-to-end production debugging platform with Next.js and React.
- Automated a 60+ minute documentation process by building a Go worker triggered by FastAPI to turn meeting data stored in PostgreSQL into reports, saving the finished files to AWS S3.

Dynamic Memory Allocator | [GitHub](#) | [Demo](#) | C++, Linux/Unix, Vue.js

Feb 2026 – Mar 2026

- Engineered a 64-bit memory allocator in C++ on Linux/Unix with segregated free lists and best-fit search, achieving 74.4% average heap utilization and throughput of 12.9M operations per second.
- Built a Vue.js visualizer that replays 25+ allocation traces to show heap fragmentation and memory reuse.
