EDUCATION

Carnegie Mellon University

May 2028

Bachelor of Science in Computer Science | Dean's List with High Honors

Pittsburgh, PA

- **Relevant Coursework:** Data Structures and Algorithms, Functional Programming (Teaching Assistant), Computer Systems, Object-Oriented Programming, Mobile and Web Development, Discrete Mathematics, Linear Algebra

TECHNICAL SKILLS

Languages: Python, Java, C, C++, TypeScript, JavaScript, SQL, HTML, CSS, Kotlin, Shell, Groovy

Developer Tools: Git, AWS, Jenkins, Docker, Jira, Linux/Unix, Google Cloud Platform, Railway, MySQL, PostgreSQL

Frameworks/Technologies: React, Vite, Node.js, Spring Boot, Flask, Angular, Next.js, Express.js, FastAPI

EXPERIENCE

Software Engineer Intern

Jun 2026 – Present

The Washington Post

Washington, DC

- Build a complaint dispatch application for 2.5M+ digital and print subscribers using React, TypeScript, Express.js, and MySQL to help carriers view and resolve service issues in real time, closing tickets 40% faster.
- Automate the build, test, and deployment life cycles for 6 full-stack applications by designing Jenkins CI/CD pipelines with Groovy and Docker containerized agents, enabling zero-downtime releases across 4 environments.
- Deploy 35+ microservices to ECS by writing object-oriented AWS Cloud Development Kit stacks in Java that automatically provision Route 53 DNS and load balancing with no manual intervention.

Software Developer Intern

Aug 2025 – May 2026

ScottyLabs

Pittsburgh, PA

- Developed a campus dining progressive web app using React, Vite, JavaScript, and TypeScript to help 10,000+ students across campus check dining availability and browse menus and specials across 30+ locations.
- Engineered a Node.js web scraping service on Railway that periodically fetches and serves dining data in JSON format across 8 REST endpoints with over 99% uptime.
- Led the development of distance-based and rating-based sorting features using React Query and geolocation data from REST APIs, resulting in a 3x increase in daily active sessions after launch.
- Configured GitHub Actions CI/CD pipelines with Vitest unit tests and Oxlint linting, catching type errors and style violations on every pull request before merging to production.

Software Engineer Intern

May 2022 – Oct 2024

Vytal.AI

McLean, VA

- Created a gaze-tracking assessment software using Python, Flask, Next.js, and HTML/CSS, processing 10,000+ ocular data points to quantify brain health in under 30 seconds.
- Managed NoSQL data storage with MongoDB and cloud deployment on AWS EC2, serving 300+ clinical beta users.
- Collaborated across software engineering and machine learning teams through Agile sprints and daily standups using Jira and Notion, delivering features biweekly.

PROJECTS

Sprynt | *Next.js, React, WebSockets, FastAPI, PostgreSQL, AWS S3, Jira, OAuth 2.0*

Mar 2026 – Present

- Develop a full-stack incident response platform with Next.js, React, and WebSockets that helps on-call engineers investigate live production outages in a shared workspace, eliminating context switching across 5+ tools.
- Design AI analysis workflows using Claude, GPT, and Gemini LLMs to convert live Zoom meeting transcripts and GitHub repository context into ranked root-cause files and code fix suggestions with 95% accuracy.
- Implement a FastAPI artifact pipeline with PostgreSQL and AWS S3 that auto-generates downloadable reports on resolution, replacing a previously manual 15+ minute documentation process.
- Integrate Jira and OAuth 2.0 flows with automatic token refresh to sync spoken action items into engineering tickets.

RoutineRemind | *Kotlin, Java, Spring Boot, Angular, C++, Google Cloud Platform, Docker* Jun 2022 – Aug 2025

- Created a patent-pending Android and web app using Kotlin, Java, Spring Boot, and Angular to help children with autism follow daily routines through visual task cards and an AI chatbot, serving 250+ accounts.
- Deployed the backend as a Docker container on Google Cloud Platform to deliver live schedule updates and automated push notifications, handling 1,000+ daily requests across linked family accounts.
- Architected a multi-layer chatbot with Gemini and a C++ audio-processing module to enable text and voice queries, achieving sub-200ms latency on average.
