EDUCATION

Carnegie Mellon University

May 2028

Bachelor of Science in Computer Science | Dean's List with High Honors

Pittsburgh, PA

- **Relevant Coursework:** Data Structures and Algorithms in C, Computer Systems, Object-Oriented Programming, Functional Programming (Fall 2026 Teaching Assistant), Probability and Computing, Discrete Mathematics

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, C, C++, SQL, Go (Golang), Shell

AI & Developer Tools: Git, Docker, Jenkins, Jira, Claude Code, GitHub Copilot, Anthropic API, Gemini API, Kiro

Frameworks & Technologies: React, Node.js, FastAPI, Flask, Angular, Next.js, Vite, REST APIs

Cloud & Infrastructure: AWS, PostgreSQL, MySQL, MongoDB, Linux/Unix, CI/CD, Akamai, Nginx, Railway

EXPERIENCE

Software Engineer Intern

Jun 2026 – Aug 2026

The Washington Post

Washington, DC

- Accelerated service issue resolution by 75% across a 2.5M+ subscriber base by developing a full-stack application with React, TypeScript, Node.js, and MySQL to centralize issue tracking and operator workflows.
- Engineered a production web service to handle 25,000+ daily requests by designing a networking layer with Akamai for frontend delivery, AWS ALB for traffic distribution, and Nginx for backend service routing.
- Automated CI/CD across 4 environments by building AWS CDK infrastructure in Java and Jenkins pipelines that validate application builds before deployment to AWS S3.
- Shipped 50+ pull requests using GitHub Copilot and Kiro to accelerate debugging and unit testing.

Software Engineer Intern

Aug 2025 – May 2026

ScottyLabs

Pittsburgh, PA

- Streamlined meal planning for 10,000+ monthly active users across 30+ campus locations by developing a React, Vite, and TypeScript application that displays live dining availability and menus.
- Drove a 70% increase in daily active sessions by launching rating and distance-based search features with JavaScript and PostgreSQL, using Claude Code to improve feature iteration and code review.
- Maintained 99.9% backend uptime while refreshing dining data every 5 minutes by building Node.js REST APIs, containerizing services with Docker, and deploying the application on Railway.

Software Engineer Intern

May 2024 – Sep 2024

Vytal.ai

McLean, VA

- Delivered brain health evaluations in under 30 seconds by building a gaze-tracking model that processes 8,000+ ocular data points in Python and serves results through Flask to an Angular frontend.
- Coordinated biweekly feature releases for a cross-functional team of 20+ software engineers and machine learning researchers by organizing Agile sprints and tracking development progress in Jira.
- Scaled cloud infrastructure for 300 beta users by managing MongoDB storage and deploying services on AWS EC2.

PROJECTS

Clarity | [GitHub](#) | Python, JavaScript, Shell, Gemini API, Anthropic API, Go, MongoDB

Sep 2026 – Present

- Enable developers to visually debug programs in under 2 minutes by building a native macOS app with Python, JavaScript, and Shell scripts that captures selected code regions and renders animated execution traces.
- Generate custom visualizations by integrating Gemini 3.8 Flash via the Gemini API to interpret screenshots with OCR and Claude Sonnet 5 via the Anthropic API to produce executable Python code.
- Orchestrate requests across 3 services with a Go backend that manages job execution and retrieves relevant Manim documentation from MongoDB Atlas vector search for code generation.

Sprynt | [GitHub](#) | Next.js, React, Jira, Anthropic API, Go, FastAPI, PostgreSQL, AWS S3

Mar 2026 – Aug 2026

- Consolidated 5+ incident response tools into one shared workspace by building an end-to-end production debugging platform for on-call engineers using Next.js and React.
- Built AI workflows that achieve 95%+ accuracy on Jira ticket assignment and GitHub code fix recommendations by analyzing Zoom transcripts with Claude Sonnet 4.6 via the Anthropic API.
- Automated a 60+ minute documentation process by building a Go worker triggered by FastAPI that generates meeting reports from PostgreSQL and uploads artifacts to AWS S3.
