EDUCATION

Carnegie Mellon University

May 2028

Bachelor of Science in Computer Science | Dean's List with High Honors

Pittsburgh, PA

- **Relevant Coursework:** Data Structures and Algorithms, Functional Programming (Teaching Assistant), Computer Systems, Object-Oriented Programming, Web Development, Discrete Mathematics, Linear Algebra

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, C/C++, SQL, HTML/CSS, Go, Kotlin

Frameworks & Technologies: React, Node.js, Spring Boot, FastAPI, Flask, Next.js, Vite, REST APIs

AI & Developer Tools: Git, Docker, Jenkins, Jira, GitHub Copilot, AWS Kiro, Cursor, Claude, GPT-4o, Gemini

Cloud & Databases: AWS, PostgreSQL, MySQL, MongoDB, Google Cloud Platform, Railway

EXPERIENCE

Software Engineer Intern

Jun 2026 – Aug 2026

The Washington Post

Washington, DC

- Accelerated service issue resolution by 75% across a 2.5M+ subscriber base by developing a full-stack application with React, TypeScript, Node.js, and MySQL to centralize issue tracking and operator workflows.
- Scaled microservices traffic to 25,000+ daily requests by designing a networking layer with Akamai CDN for frontend delivery, AWS Application Load Balancer for request distribution, and Nginx for backend routing.
- Automated CI/CD across 4 environments by developing AWS CDK infrastructure in Java and Jenkins pipelines that lint, test, compile, and deploy the application to AWS S3.
- Shipped 50+ pull requests using AWS Kiro and GitHub Copilot to diagnose bugs and improve code quality.

Software Developer Intern

Aug 2025 – May 2026

ScottyLabs

Pittsburgh, PA

- Streamlined meal planning for 10,000+ monthly active users across 30 campus locations by developing a React, Vite, and TypeScript application for live dining availability and menus.
- Drove a 70% increase in daily sessions by launching rating and distance-based search features with JavaScript and PostgreSQL, using Cursor to optimize feature iteration and code review.
- Maintained 99.9% backend uptime while refreshing dining data every 5 minutes by building Node.js REST APIs, containerizing services with Docker, and deploying on Railway.

Software Engineer Intern

May 2022 – Oct 2024

Vytal.ai

McLean, VA

- Delivered brain health evaluations in under 30 seconds by building gaze-tracking software that processes 8,000+ ocular data points in Python and serves results through Flask to a Next.js frontend.
- Coordinated biweekly feature releases for a cross-disciplinary team of 20+ engineers and ML researchers by organizing Agile sprints and tracking development progress in Jira.
- Scaled cloud infrastructure for 300 beta users by managing MongoDB storage and deploying services on AWS EC2.

PROJECTS

Sprynt | Next.js, React, Go, FastAPI, PostgreSQL, AWS S3, Jira, GitHub, Claude, GPT-4o Mar 2026 – Present

- Consolidate 5+ incident response tools into one shared workspace by building a full-stack production debugging platform with Next.js and React for on-call engineers.
- Achieve 95%+ accuracy on automated Jira ticket assignment and GitHub code fix suggestions by extracting action items from Zoom transcripts over WebSockets with Claude and GPT-4o agents.
- Eliminate a 60+ minute documentation process by building a Go worker triggered by FastAPI to generate meeting reports from PostgreSQL and upload artifacts to AWS S3.

RoutineRemind | Java, Kotlin, Spring Boot, Angular, C++, GCP, Docker

Jun 2022 – Aug 2025

- Served 250+ students and caregivers by building a patent-pending assistive scheduling app using Java, Kotlin, Spring Boot, and Angular for accessible daily routine management.
- Enabled 5,000+ daily requests across linked family accounts by deploying a Dockerized RESTful service on Google Cloud Platform for schedule synchronization and push notifications.
- Built a chatbot powered by Gemini and C++ audio preprocessing for conversational schedule guidance, achieving under 2-second response latency across voice interactions.
